

Title: Delivering Affordable Cancer Care with High Quality and at Scale in India

Abstract:

Tata Memorial Centre has pioneered models of cancer care delivery, which are based on evidence-based management and affordable and implementable solutions. It has consistently advocated and created templates for the hub-and-spoke model of care, so that patients can receive care close to their homes. TMC has also created an ecosystem for achieving high standards of excellence in training and education, clinical and translational research and public health. The keynote talk will cover these aspects of TMC functioning with appropriate examples, in the contest of social and economic imperatives of India.
